

Enhanced Siding Package

If you are thinking of adding insulation, consider adding one of our Enhanced Siding Upgrade Packages. It's a layer of sheathing, consisting of either Orientated Strand Board (OSB) or plywood and house wrap (Tyvar) which provides a moisture barrier to your structure.

The Enhanced Siding Upgrade Package provides a protective seal as well as adding shear strength and rigidity to the building. Sometimes it is required when applying for a building permit.

When insulating your building for year round use, the addition of the Enhanced Siding Upgrade Package is a must. To avoid the accumulation of humidity (and subsequent deterioration of your walls), it is important to maintain a moisture and vapour barrier between the inside and outside of your building.
