

Electrical/Plumbing/Insulating

When building your Todd's Sheds structure, you might want to consider outfitting it with electrical, plumbing and insulation for year round use.

Below we've included some suggestions to help you with your goals.

Electrical

Todd's Sheds structures are purposely left exposed to accommodate various electrical applications. Whether you intend to light the inside or install a decorative ceiling fan, we provide the flexibility for you to choose the most suitable option. Or simply allow a qualified electrician to do the interior wiring and connections.

Plumbing

Todd's Sheds structures can be fitted with appropriate plumbing fixtures so you can install interior enhancements such as pool change rooms, bathrooms, or sinks. We can provide stud layouts or customize the wall framing to accommodate your plumbing design.

Insulation

To ensure that you enjoy your Todd's Sheds structure year round, consider insulating your walls. This helps to keep the heat (or cool air) in and the moisture out.

There are several ways you can finish your structure's interior (cedar finishing, drywall, wainscoting etc.), be sure to have the appropriate insulation and vapour barriers in place to maintain a moisture free environment. To help with this please see our Enhanced Siding Package.
